RoboVent Showcases their Fusion 3 Line!

Columbus, Ohio (April 8, 2015) – RoboVent (www.robivent.com), a leading provider in Industrial Filtration and Ventilation products, is featuring their innovative Fusion 3 series product line for the month of April. Over the years RoboVent has introduced a number of important breakthroughs in air-cleaning technology, yet we recognized that this technology could be taken to the next level to master a product that is more capable, more powerful, and at the same time, much simpler. RoboVent set out to bring all these things together and fuse them into one distinctly unique product platform. All of these efforts were combined to create a dust collector that has very low operating costs, is incredibly simple to use and is remarkably easy to install — in any facility, and in any part of the world. It was from this inspiration that the Fusion 3 Series was born. RoboVent started by re-examining dust collection from the ground up, using powerful CFD simulation software that allowed us to simulate the unseen airflow patterns in all parts of the equipment. Every part of the equipment was carefully reviewed and refined to maximize performance. By utilizing state-of-the-art fabrication technology and lean-manufacturing principles as well as a borderline fanatical commitment to quality, RoboVent has carefully structured the entire manufacturing process all the way through its culmination: a rigorous 137-point quality-control checklist.

Standard Features of the Fusion3 Collectors include:

- All-In-One Complete Packaged Product
- Built-In Control Panel with ePad
- SafeSensor Particulate Monitoring
- Dynamic Pulsing System
- Endurex RMO Filters
- Snap Lock Filter Clamp
- Integrated Base and Containment Unit
- Rugged Cabinet Design

To learn more about the Fusion 3 series and how RoboVent can help your facility, please visit or call their offices at 614-428-1700.

About The Company

During the past 25 years RoboVent has established itself as leader in the field of air filtration with highly efficient, reliable and cost-effective systems installed at major manufacturing operations across North America. Applications include welding, cutting and metalworking; dust collection and lubricant mist collection; and general ventilation. RoboVent is headquartered in Sterling Heights, Mich., with sales and service centers located throughout the United States and the world. At its core, RoboVent is an environmental problem solving company for process systems. Their expertise and resources in collecting, filtering and recycling contaminated air can be applied to almost any process in the manufacturing environment.
